

I believe that satellite radio is the greatest thing since sliced bread. I do not like to have to switch to static-filled AM stations to receive local weather and traffic information. Even FM radio stations often seem to me that they are not entirely 'in tune'. It seems that no matter how much I would pay for a radio, I could never get an accurate frequency programmed in to cleanly listen. Then I heard a demo of XM radio at a local electronics store. Suddenly a new world was opened up to me. The stations are so crystal clear and always "in tune" that I love this!

And my local market, basically Milwaukee (WI), does not offer all the selection of stations either. I particularly enjoy listening to '40s and '50s radio shows and "Frank's Place" -- a station playing all Sinatra-style music.

When I heard XM was going to start offering local weather and traffic, I was excited to start listening. XM offers me the full spectrum of what I believe radio has to offer, crystal clear, no matter where I am in the country. You can't beat it!

Now XM is telling me that Congress and the FCC want to stop them from providing these choices. WHY? I wonder what the real motive is behind this initiative.

I pay for this radio service because I can get the full spectrum. WHY WOULD YOU WANT TO TAKE THIS AWAY?

Please REJECT NAB's petition 04-160!
